Team 3 Evaluations

[Prototype link](#)

Issue: Unable to delete one's tasks

Severity: 2

Heuristic violated: User control and freedom

Description: When you go to the task and you create a task to complete, but you realize you don't want to do the task so you want to delete the task, not state that it's "completed". So it doesn't allow you to delete this task.

Issue: No navigation bar allowing users to easily navigate from screen to screen

Severity: 3

Heuristic violated: User control and freedom

Description: When in certain pages such as the "Health Overview", there's no way to go back to the home page or other pages such as tasks. You'd be stuck in the overview if you navigate to that page. There is also no way to navigate to that page currently from what I see.

Issue: Initial questionnaire does not tailor the app to your needs

Severity: 2

Heuristic violated: Consistency and standards

Description: The initial page asks a series of questions which is typically used to tailor the app to your needs, however based on all of the other pages, these questions are not used to recommend specific plans or anything.

Issue: No display or feedback for synced calendar events

Severity: 3

Heuristic violated: Visibility of System Status

Description: On the Daily Dashboard, the "Synced Calendar Events" section shows only a static calendar icon and label. No upcoming events are listed, nor is there any indicator of whether the sync succeeded.

Users can't tell if their calendar actually synced or view any details without leaving the app to check their device's native calendar, leaving users unsure of the feature's reliability and interrupting their task flow.

Issue: No way to filter tasks by category or priority

Severity: 3

Heuristic violated: Flexibility and efficiency of use

Description: The task list shows all upcoming tasks, but there is no option to filter or sort them by category or the priority level. As the number of tasks increases, it can become difficult for users to focus on what is most important. Adding filters or an option to move tasks into highest to lowest priority level would be beneficial for users in managing their workload effectively.

Issue: Inconsistent Terminology Across Screens

Severity: 2

Heuristic violated: Consistency and Standards

Description: The app uses inconsistent terminology when referring to similar concepts. For example: The setup screen uses the word "Meds", while the "Habit Tracker" screen uses "Take medication". The "Daily Brief" and "Tasks" screens both include action items, but the terminology and layout differ, leading to potential confusion over their relationship or purpose. The "Log Snacks" and "Health Overview" sections both reference calorie intake, but there's no clear link between them (e.g., whether logged snacks update calorie counts).

Team 4 Evaluations

[Prototype Link](#)

Issue: Unable to see messages feature

Severity: 3

Heuristic violated: User control and freedom

Description: When you go to North Texas Food Bank, and once you invite your friends, you cannot message them as it doesn't show how that option functions.

Issue: About section is too long and has small text

Severity: 1

Heuristic violated: Aesthetic and minimalist design

Description: The about section for the North Texas Food Bank is too long and also has small text that would be hard to read from a phone screen. The user would likely not read this long of text and also would struggle to do so. The font that says "About" is even smaller than the paragraph itself.

Issue: Text on welcome page matches with background in areas

Severity: 1

Heuristic violated: Aesthetic and minimalist design

Description: The text in the welcome page saying "Find a way to help, discover opportunities that match your passions" is in white which matches the floor in the background picture. This makes it harder to read for the user.

Issue: Ambiguous bottom navigation icons

Severity: 2

Heuristic violated: Recognition rather than recall

Description: The bottom navigation bar uses the same star icon for both the "Opportunities" and "Messages" tabs. Users cannot rely on icons alone to distinguish these tabs and must read the labels every time, which slows down navigation and increases cognitive effort. Assigning a unique and meaningful icon to each tab would allow users to recognize their desired tab at a glance.

Issue: Lack of searchable list for cause selection

Severity: 3

Heuristic violated: Flexibility and efficiency of use

Description: The “What causes do you care about?” section displays only a few causes without an option to search or select from a list. This limits the users ability to find and choose causes that they care about, especially if their interests aren’t in the few causes given. Adding a dropdown or searchable list would improve usability.

Issue: No feedback after inviting friends

Severity: 2

Heuristic violated: Visibility of System Status

Description: When a user taps to invite friends (e.g., Leo, Kayla), the interface does not display any confirmation or status indicator that the invitation was sent successfully. Without visual or textual feedback (e.g., a checkmark, message, or toast notification), users might repeatedly tap or be unsure if the action worked.
